# Buying an electric vehicle has many overlooked charging implications and we care about EV readiness in your home

**90%** of EV charging takes place at home<sup>2</sup>

**100%** of homes will need to be outfitted with the correct charging infrastructure.

<sup>1</sup>Electric Vehicle Energy Management System

<sup>2</sup>[www.cbc.ca/news/canada](http://www.cbc.ca/news/canada)

Homeowners want to have uninterrupted access to their own chargers, be able to manage their own electricity bills, and pay for a one time installation fee, without continuing costs for a service they don't need.

## The EVEMS solution:

- Is compatible with most chargers or EVs
- Simplifies your electricity bill
- Has the potential to reduce the cost of electricity
- Optimizes electrical capacity in a building
- Prepares your home for future buyer needs
- Is 100% future proof because we add our innovative technology to your existing infrastructure

**A proven and unique technology.**

**No other product on the market offers the same flexibility and advantage.**

Make your building EV ready because the electrification, construction, and real estate industries are changing.

Of the 200,000 EVs on the road in Canada, 83,000 were registered in 2021<sup>2</sup>
